Digital Literacy Project Report

Name: NANCY
Registration Number: 25MEI10095
Branch: CYBER SECURITY
Year: FIRST YEAR INTEGRATED MTECH
University: VIT Bhopal University

INTRODUCTION

In today's world, digital technology plays an important role in our daily lives. From attending online classes to communicating through emails and social media, students rely heavily on digital tools. This project was given to help us understand how to use these tools effectively and responsibly.

As a Student Digital Ambassador, the aim of this project was to explore different aspects of digital literacy, such as creating an online presence, using platforms for learning, communicating professionally, and understanding cyber safety.

Through this project, I gained practical experience by working on real tools and tasks. It helped me understand not only how to use technology, but also how to use it in a safe and professional manner.

TASK 1: DIGITAL LITERACY INFOGRAPHIC

For this task, I used Canva to create an infographic on digital literacy. Canva is a simple and user-friendly tool that provides various templates for designing. I created a one-page infographic that explains the meaning of digital literacy and its importance for students.

The infographic includes topics like useful digital tools, safe internet practices, and maintaining a professional online presence. I focused on using short and clear points so that the information is easy to understand. I also tried to keep the design neat and visually appealing.

While working on this task, I realized that digital literacy is not just about using devices, but also about using them responsibly and safely. One interesting thing I noticed is that many students use digital tools daily but are not aware of basic safety practices.

The main difficulty I faced was organizing all the information in a single page without making it look crowded. Overall, this task helped me understand the importance of digital awareness.

TASK 2: DIGITAL PORTFOLIO

In this task, I created my digital portfolio using platforms like GitHub, LinkedIn, and another platform. These platforms are important for students as they help in building a professional identity online.

On GitHub, I created my profile and added a README file to introduce myself. It is mainly used to store and share projects. On LinkedIn, I added my education details and created a

basic professional profile. I also explored another platform to understand how different online communities work.

Each platform has a different purpose. GitHub is useful for improving technical skills, while LinkedIn helps in networking and exploring career opportunities.

In the coming years, I plan to use these platforms actively by uploading my projects, improving my profile, and connecting with professionals. This task helped me understand how important it is to have a digital presence in today's world.

TASK 3: PLATFORMS

In this task, I explored both coding and collaboration platforms. I created an account on Hacker Rank and solved a beginner-level problem. It helped me understand how coding platforms work and how solutions are submitted and evaluated.

I also created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. The form included both multiple-choice and short-answer questions. I connected the form to a Google Sheet to view responses easily.

This task was very practical and interesting. Coding platforms help in improving logical thinking and problem-solving skills, while tools like Google Forms are useful for collecting data and conducting quizzes.

In the future, I can use these tools for academic work such as assignments, surveys, and practice. Overall, this task helped me learn how digital tools can be used effectively for learning and collaboration

TASK 4: EMAIL ETIQUETTE

In this task, I learned about professional communication through email. I wrote two emails — one for requesting an assignment extension and another for applying for an internship. This helped me understand the importance of using proper structure, polite language, and clear subject lines in emails.

I also created a checklist of do's and don'ts for social media usage. It highlighted how students should behave responsibly online and avoid sharing sensitive information.

Poor digital communication can create misunderstandings and affect a person's image. For example, sending an email without proper greeting or structure can appear unprofessional.

This task helped me understand that communication in the digital world should be handled carefully and professionally.

TASK 5: CYBERCRIME AWARENESS

In this task, I studied a case related to UPI fraud, which is one of the most common cybercrimes today. I learned how fraudsters trick people into sharing sensitive information or approving fake payment requests.

I also created a prevention checklist to spread awareness about staying safe online. It included tips like not sharing OTPs, verifying payment requests, and avoiding suspicious links.

While researching this topic, I was surprised to see how easily people fall into such traps due to lack of awareness.

One habit I will change is being more careful while making online transactions and verifying everything before taking action. This task helped me understand the importance of cyber safety.

CONCLUSION

This project helped me gain a better understanding of digital literacy and its importance in daily life. I learned how to use different digital tools, create a professional online presence, and communicate properly through emails. I also became more aware of online risks and how to stay safe.

Overall, this project was very useful and practical. It not only improved my technical knowledge but also helped me develop responsible digital habits that will be helpful in the future.
